

Radon Air Pollution: Communication and protective behavior

Webinar co-organised by ERA, IAEA, RadonNorm project and SHARE

Wednesday, 2nd of September 2020 from 10.00 – 11.30

[Register here](#)

With a new legislation, radon risk communication has become a priority in many countries in order to mitigate the second most prevalent cause of lung cancer worldwide. However, the efforts to communicate the risks of radon often remain ineffective. Although radon tests are easily accessible in most countries, with the possibility of effective protective action, the levels of radon testing and subsequent home remediation remain lower than aimed for.

This webinar aims to help practitioners responsible for radon communication strategies to develop evidence-based, theory-based and strategic communication according to the new EU Basic Safety Standard Directive.

The speakers and panelists in this webinar are radon mitigation experts, practitioners and researchers in radon risk communication. The audience will be able to ask questions and contribute to the discussion on-line.

Moderator of this webinar is Ms. Klara Himmelbauer, AGES and European Radon Association

Panelists

- European Organization for Research and Treatment of Cancer AISBL, EORTC (tbc)
- International Atomic Energy Agency, IAEA
- Belgian Nuclear Research Centre
- Communication scientists from H2020 RadoNorm project
- University of Antwerp, Belgium
- Kings College London, UK (tbc)
- European Radon Association, ERA
